Response Summary:

Parse Worksheet

Goal: to understand the structure of the data
Objectives: Students will change data into a format that tags each part of the data with its intended use
Outcomes: Every element of the data will be broken into its individual parts

1. Student Information *

First Name	Chia-Hua (Joy)
Last Name	Lin
Course *(e.g. CGT 270-001)*	CGT 27000-LC4
Term *(e.g. F2019)*	F2021

2. Email Address *
lin1424@purdue.edu

3. Visualization Assignment *
- Lab Assignment

Understand

4. Parse Data: List each field and its data type. Refer to Fry (page 8-9, 2007) for examples of description of different data types (string, float, character, integer), you can also create user defined types (some combination that uniquely identifies data like the Index type in the Fry 2007 page 9 example) *
name: string
total: float
male_share: float
female_share: float
gap: float

5. Assumptions: List any assumptions you are making about the data and/or the visualization challenge (aka the project) *
a. The process of filtering for unisex names was not described, so I am pretty much assuming that these are all the possible unisex names in the US that are used.
